##Q1. How many different candy types are in this dataset?

```
nrow(candy)
```

```
[1] 85
```

There are 85 different candy types in this dataset.

##Q2. How many fruity candy types are in the dataset?

```
sum(candy$fruity)
```

```
[1] 38
```

There are 38 fruity candy types in the dataset.

```
candy["Twix", ]$winpercent
```

```
[1] 81.64291
```

##Q3. What is your favorite candy in the dataset and what is it's winpercent value?

```
candy["Snickers", ]$winpercent
```

```
[1] 76.67378
```

My favorite candy in the dataset is Snickers. Snickers has a winpercent value of 76.67378.

##Q4. What is the winpercent value for "Kit Kat"?

```
candy["Kit Kat", ]$winpercent
```

```
[1] 76.7686
```

The winpercent value for Kit Kat is 76.7686.

##Q5. What is the winpercent value for "Tootsie Roll Snack Bars"?

```
candy["Tootsie Roll Snack Bars", ]$winpercent
```

```
[1] 49.6535
```

The winpercent value for Tootsie Roll Snack Bars is 49.6535.

```

Data summary

Name	candy
Number of rows	85
Number of columns	12
_____	
Column type frequency:	
numeric	12
_____	
Group variables	None

Variable type: numeric

skim_variable	n_missing	complete_rate	mean	sd	p0	p25
chocolate	0	1	0.44	0.50	0.00	0.00
fruity	0	1	0.45	0.50	0.00	0.00
caramel	0	1	0.16	0.37	0.00	0.00
peanutyalmondy	0	1	0.16	0.37	0.00	0.00
nougat	0	1	0.08	0.28	0.00	0.00
crispedricewafer	0	1	0.08	0.28	0.00	0.00
hard	0	1	0.18	0.38	0.00	0.00
bar	0	1	0.25	0.43	0.00	0.00
pluribus	0	1	0.52	0.50	0.00	0.00
sugarpercent	0	1	0.48	0.28	0.01	0.22
pricepercent	0	1	0.47	0.29	0.01	0.26
winpercent	0	1	50.32	14.71	22.45	39.14

##Q6. Is there any variable/column that looks to be on a different scale to the majority of the other columns in the dataset? Yes, variable sd looks to be on a different scale to the majority of the other columns in the dataset.

##Q7. What do you think a zero and one represent for the candy$chocolate column?

The zero for the chocolate column represents false (that it is NOT chocolate). The one for the chocolate column represe

```

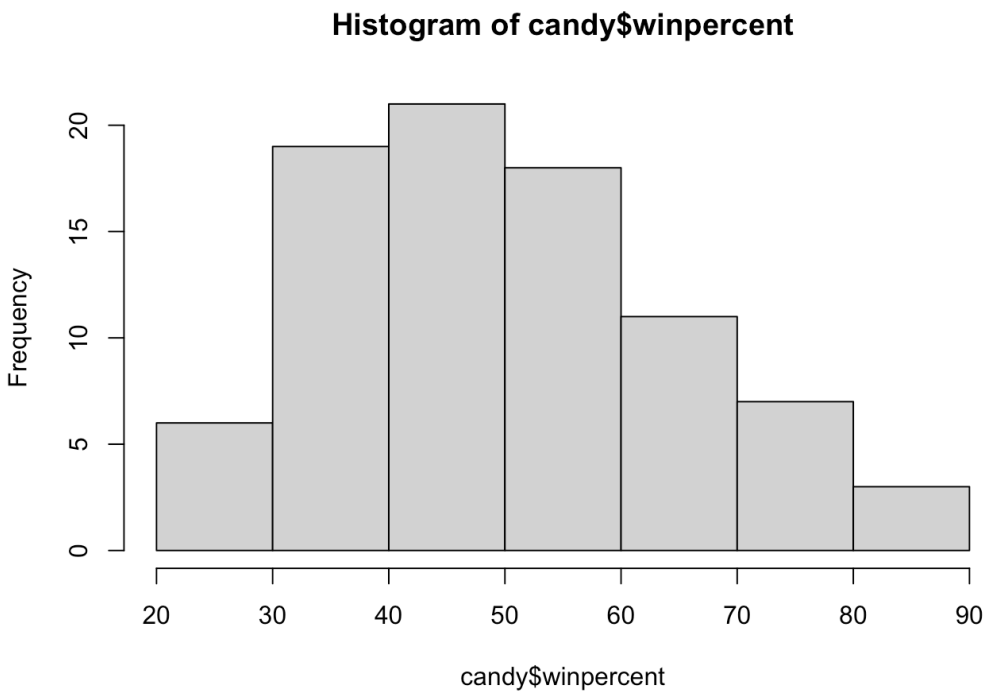
##Q8. Plot a histogram of winpercent values

```
hist(candy$winpercent)
```



##Q9. Is the distribution of winpercent values symmetrical? Based off the histogram, the distribution of winpercent values are not symmetrical.

##Q10. Is the center of the distribution above or below 50%? The center of the distribution is below 50%.

##Q11. On average is chocolate candy higher or lower ranked than fruit candy? —- On average chocolate candy (60.92153) is higher ranked than fruit candy(44.11974).

```
chocolate <- candy$winpercent[as.logical(candy$chocolate)]
fruity <- candy$winpercent[as.logical(candy$fruity)]
```

```
mean(chocolate)
```

```
[1] 60.92153
```

```
mean(fruity)
```

```
[1] 44.11974
```

##Q12. Is this difference statistically significant? The difference is statistically significant because the p-value (2.871e-08) is less than 0.05 meaning the null hypothesis is rejected.

```
t.test(chocolate, fruity)
```

```
    Welch Two Sample t-test

data:  chocolate and fruity
t = 6.2582, df = 68.882, p-value = 2.871e-08
alternative hypothesis: true difference in means is not equal
to 0
95 percent confidence interval:
 11.44563 22.15795
sample estimates:
mean of x mean of y

Kit Kat                         0.511   76.76860
Twix                            0.906   81.64291
ReeseÕs Miniatures              0.279   81.86626
```

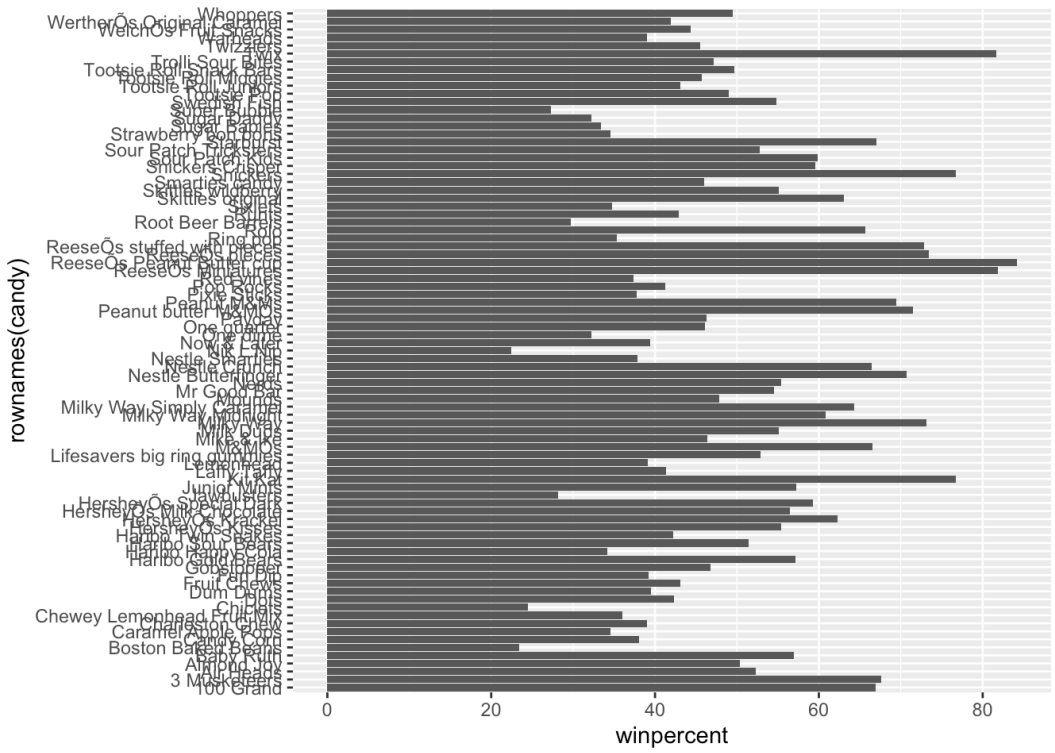
```
ReeseÕs Peanut Butter cup        0.651   84.18029
```

##Q15. Make a first barplot of candy ranking based on winpercent values.

```
library("tidyverse")
```

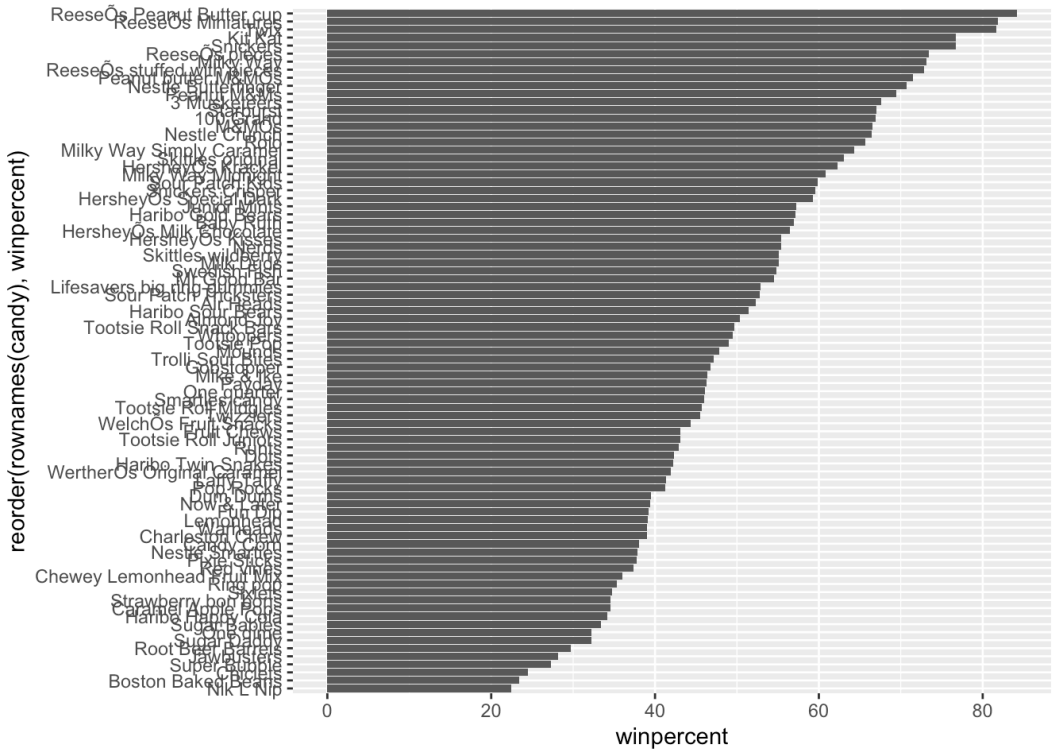
```
── Attaching packages ─────────────────────────────────────── tidyverse 1.3.2 ──
✔ ggplot2 3.3.6      ✔ purrr   0.3.5
✔ tibble  3.1.8      ✔ dplyr   1.0.10
✔ tidyr   1.2.1      ✔ stringr 1.4.1
✔ readr   2.1.3      ✔ forcats 0.5.2
── Conflicts ────────────────────────────────────────── tidyverse_conflicts() ──
✖ dplyr::filter() masks stats::filter()
✖ dplyr::lag()    masks stats::lag()
```

```
ggplot(candy) + aes(winpercent, rownames(candy)) + geom_col()
```



##Q16. This is quite ugly, use the reorder() function to get the bars sorted by winpercent?

```
ggplot(candy) + aes(winpercent, reorder(rownames(candy),winperc
        om_col()
```

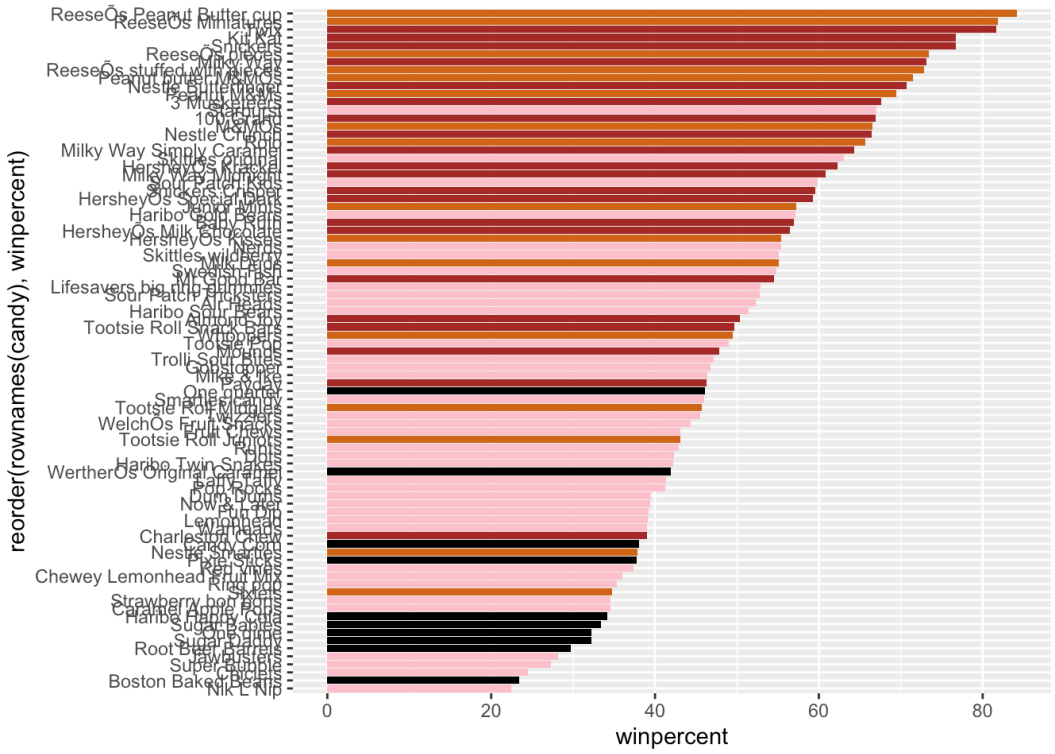


```
my_cols=rep("black", nrow(candy))
my_cols[as.logical(candy$chocolate)] = "chocolate"
my_cols[as.logical(candy$bar)] = "brown"
my_cols[as.logical(candy$fruity)] = "pink"
```

##Q17. What is the worst ranked chocolate candy? The worst ranked chocolate candy is sixlets.

##Q18. What is the best ranked fruity candy? The best ranked fruity candy is Starburst.

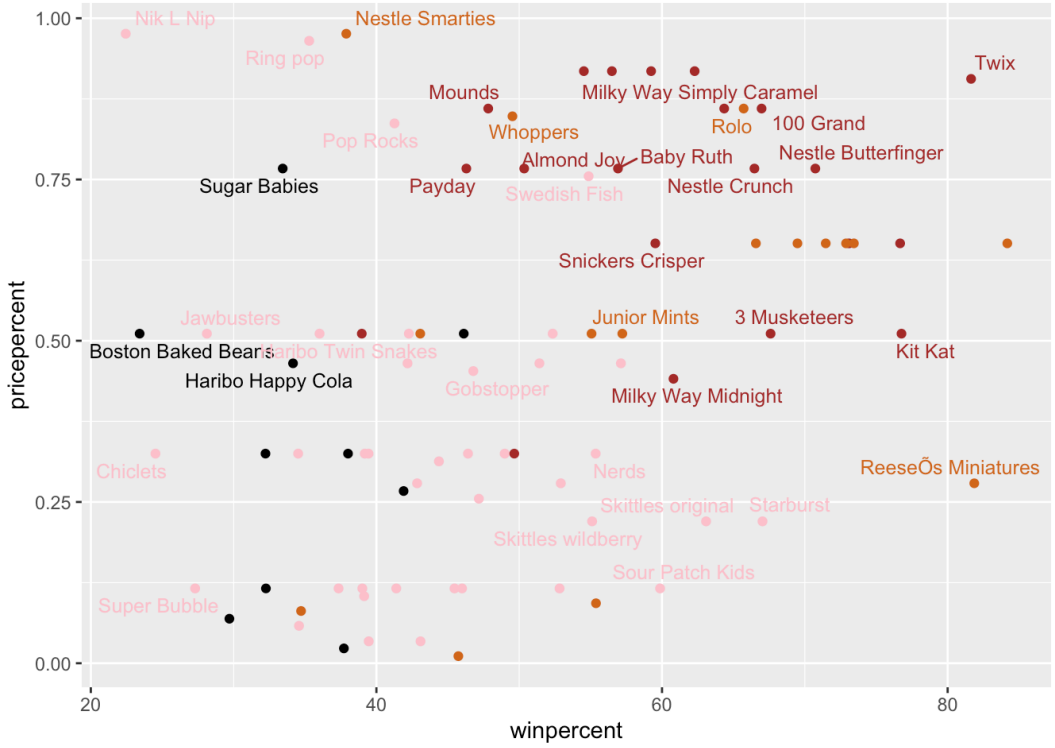
```
ggplot(candy) +
  aes(winpercent, reorder(rownames(candy),winpercent)) +
  geom_col(fill=my_cols)
```



```
library(ggrepel)
```

```
ggplot(candy) +
  aes(winpercent, pricepercent, label=rownames(candy)) +
  geom_point(col=my_cols) +
  geom_text_repel(col=my_cols, size=3.3, max.overlaps = 5)
```

```
Warning: ggrepel: 50 unlabeled data points (too many
overlaps). Consider
increasing max.overlaps
```



##Q19. Which candy type is the highest ranked in terms of winpercent for the least money - i.e. offers the most bang for your buck?

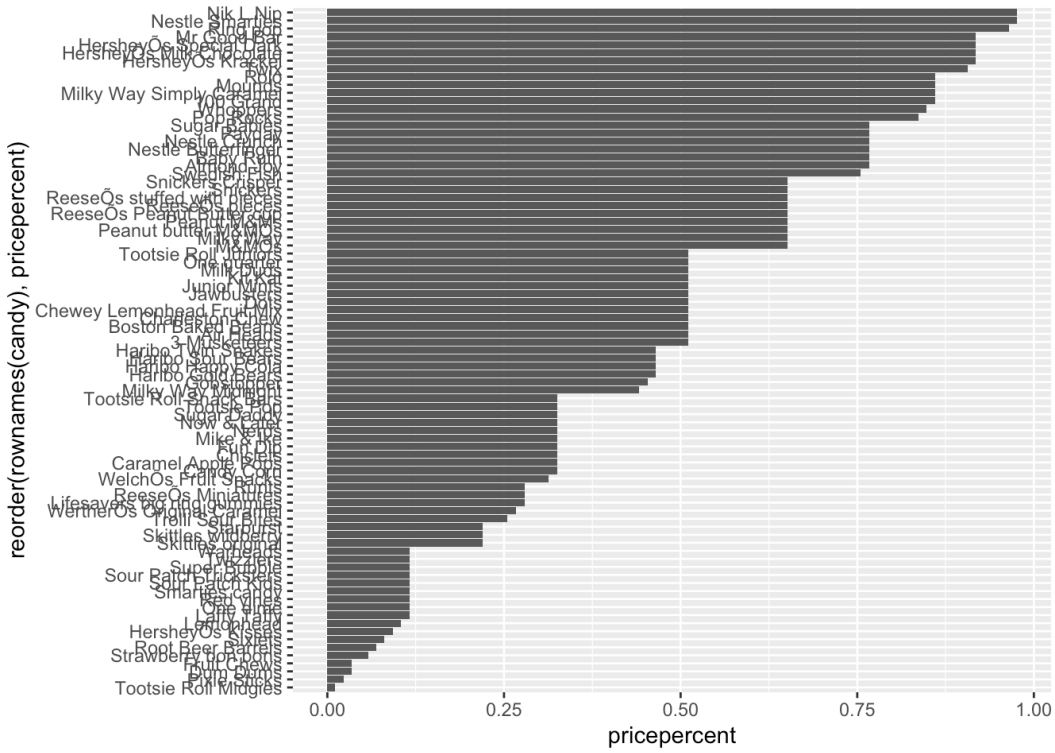
Reeses Miniatures is the candy with the highest winpercent and the lowest pricepercent.

##Q20. What are the top 5 most expensive candy types in the dataset and of these which is the least popular? The top 5 most expensive candies are Nik L Nip, Nestle Smarties, Ring pop, Hersheys Krackel and Hersheys Milk Chocolate. Out of these 5 expensive candies, the least popular candy is Nik L Nip.

```
ord <- order(candy$pricepercent, decreasing = TRUE)
head( candy[ord,c(11,12)], n=5 )
```

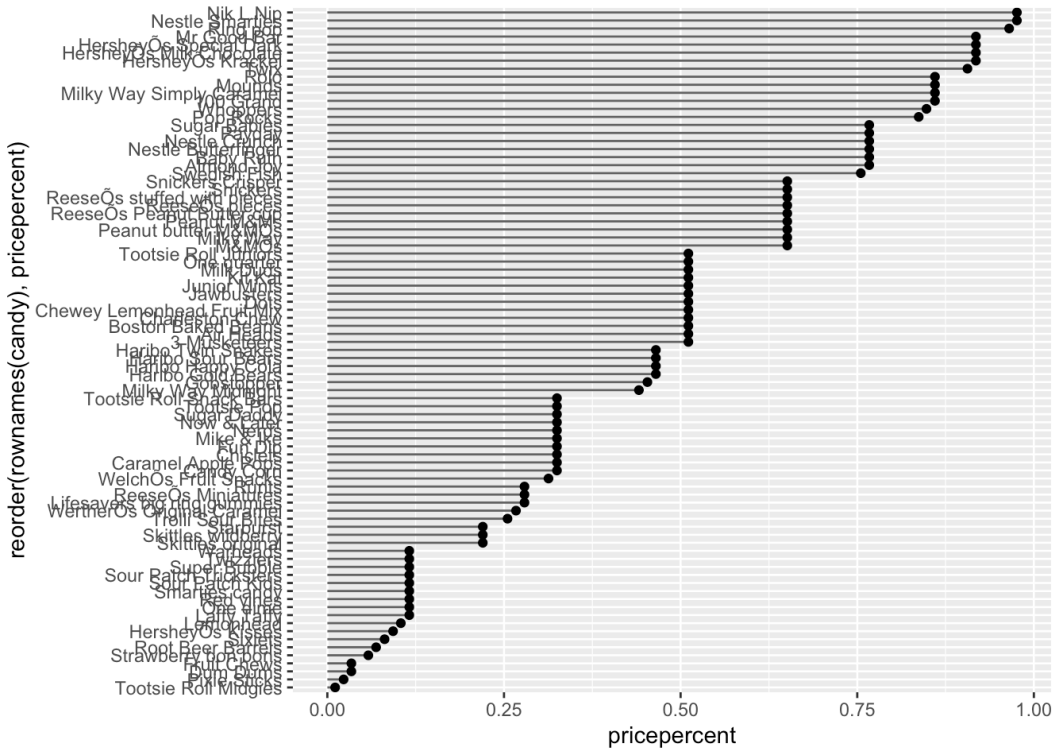
	pricepercent	winpercent
Nik L Nip	0.976	22.44534
Nestle Smarties	0.976	37.88719
Ring pop	0.965	35.29076
HersheyÕs Krackel	0.918	62.28448
HersheyÕs Milk Chocolate	0.918	56.49050

```
ggplot(candy) +
  aes(pricepercent, reorder(rownames(candy), pricepercent)) +
  geom_col()
```



##Q21. Make a barplot again with geom_col() this time using pricepercent and then improve this step by step, first ordering the x-axis by value and finally making a so called “dot chat” or “lollipop” chart by swapping geom_col() for geom_point() + geom_segment().

```
ggplot(candy) +
  aes(pricepercent, reorder(rownames(candy), pricepercent)) +
  geom_segment(aes(yend = reorder(rownames(candy), priceperce
        nt),
                   xend = 0), col="gray40") +
    geom_point()
```



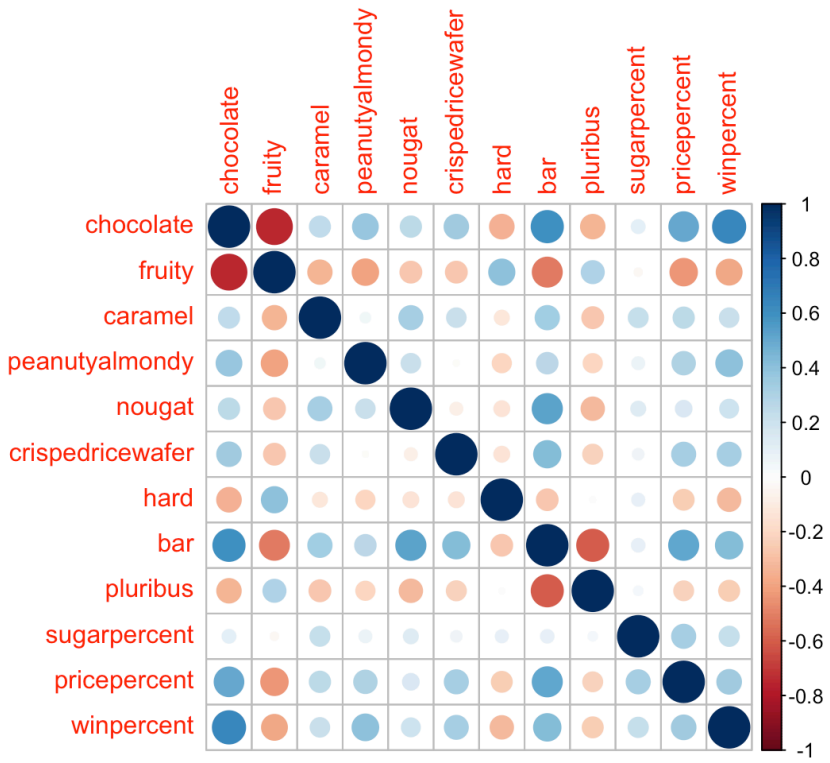
```
library(corrplot)
```

```
corrplot 0.92 loaded
```

##Q22. Examining this plot what two variables are anti-correlated (i.e. have minus values)? The two variables that are anti-correlated are fruity and chocolate.

##Q23. Similarly, what two variables are most positively correlated? The two variables that are most positively correlated are chocolate and bar

```
cij <- cor(candy)
corrplot(cij)
```



###CHECK my PCA**********

```
pca <- prcomp(candy, scale=TRUE)
summary(pca)
```

```

```

##Q24. What original variables are picked up strongly by PC1 in the positive direction? Do these make sense to you?

Fruity, hard and pluribus are the variables that are picked up strongly by PC1 in the positive direction. Yes, this makes sense to me because the scatterplot created from PC1 vs PC2 results correlate with the bar graph generated. The fruity candy was found to be positive in the scatterplot PC1 vs PC2.

```
par(mar=c(8,4,2,2))
